

ENERGY SERVICES

NuVolt Group specializes in building, servicing, testing, and commissioning the systems that power North America. A proud provider of energy services, specializing in design, construction, maintenance, and commissioning of advanced power systems, coupled with our commitment to innovation and reliability plays a key role in powering critical infrastructure and supporting the transition to renewable energy.

TRANSFORMERS

A trusted supplier of high-performance transformers, specializing in providing solutions for substations and critical power infrastructure. With a commitment to innovation and quality, we ensure that every transformer we supply is rigorously tested and compliant with industry standards, allowing for confidence that the power systems will operate seamlessly and safely.

DISTRIBUTION

NuVolt Group's service team has safely and successfully executed construction and maintenance projects on both overhead and underground distribution circuits. Our expertise has also been called upon for Storm Restoration Services across North America, where we've provided critical support in challenging conditions.

POWER

Our wiremen and technicians are experts in navigating complex environments, wiring systems that are crucial to the operation and production of electrical generation plants. Our services are delivered across a range of environments including refineries, oil and natural gas facilities, nuclear and hydroelectric power generation sites, substations, and hazardous locations.

SUBSTATION

Our wiremen and technicians are experts in navigating complex environments, wiring systems that are crucial to the operation and production of electrical generation plants. Our services are delivered across a range of environments including refineries, oil and natural gas facilities, nuclear and hydroelectric power generation sites, substations, and hazardous locations.

ECO POWER

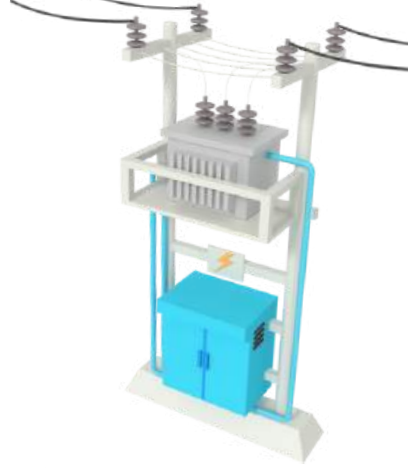

As the shift towards greener, renewable energy sources gains momentum, NuVolt Group is uniquely positioned to lead the transition to Energy Storage and Electric Vehicle Charging. With a team of highly skilled linemen and electricians, energy analysts and engineers, we are well-equipped to drive this change.

TRANSMISSION

NuVolt Group has extensive experience in constructing and maintaining overhead high-voltage transmission lines, as well as installing hundreds of miles of optical ground wire. NuVolt has successfully completed transmission work for some of the largest utilities in the country, often under challenging conditions.
