

SOLAR APPLICATION USE CASE

ABOUT SUPER CORFLO®

Super Corflo is a premier dual-walled, continuous coil electrical conduit product family. With an innovative dual-walled design that provides a lightweight and effortless installation experience, coupled with enhanced crush-resistance and a semi-smooth inner wall to facilitate smooth cable pulling.

Super Corflo products are extensively utilized in a diverse range of electrical infrastructure projects, including utility work, home construction, telecom, fibre optic Networks, EV charging systems solar farms and retail fueling stations.

In this scenario , the Contractor utilized Super Corflo in a solar installation with a termination at a 20CCT combiner box. This instal demonstrated its flexiblty for routing solar cables underground, allowing easy installation and maneuverability.

SOLAR APPLICATION INSTALL

- Connection to the 20CCT solar combiner box
- Conduit routing
- Cable management at the combiner box
